# Dex-O-Tex Terrazzo M Fine Marine Decking Product Description Sheet

**TYPE**

Dex-O-Tex Terrazzo M Fine is a thin-section seamless deck covering comprised of attractively colored ceramic-coated quartz granules embedded in a clear, catalyst-reacted epoxy resin binder. It is applied to a thickness of approximately 1/16 inch (3.175mm) and a cove base can be incorporated to form a continuous joint-free surface. Although exceptionally good bond is affected when applied directly to cleaned metal surfaces, it is considered advisable to pre-coat the steel surface with Terrazzo M Bondcoat to provide additional protection from rust and corrosion. Terrazzo M Fine has good resistance to water, cooking fats and greases, and will provide a durable decking for commissary spaces and interior sanitary and wet spaces.
